## Special Issue: Challenges in Bioinformatics and Computational Biology

Guest Editor: Werner Dubitzky

---

### Editorial

*Werner Dubitzky* 343

---

### Papers

Approaches to neuroscience data integration 345

*Kei-Hoi Cheung, Ernest Lim, Matthias Samwald, Huajun Chen, Luis Marengo, Matthew E. Holford, Thomas M. Morse, Pradeep Mutalik, Gordon M. Shepherd and Perry L. Miller*

Genome assembly reborn: recent computational challenges 354

*Mihai Pop*

Computational biology for cardiovascular biomarker discovery 367

*Francisco Azuaje, Yvan Devaux and Daniel Wagner*

FINDSITE: a combined evolution/structure-based approach to protein 378

function prediction

*Jeffrey Skolnick and Michal Brylinski*

Biological knowledge management: the emerging role of the Semantic 392

Web technologies

*Erick Antezana, Martin Kuiper and Vladimir Mironov*

Computational methods for discovering gene networks from 408

expression data

*Wei-Po Lee and Wen-Shyong Tzou*

Computational systems biology of the cell cycle 424

*Attila Csikász-Nagy*

Flux balance analysis of biological systems: applications and challenges 435

*Karthik Raman and Nagasuma Chandra*

The virtual cell—a candidate co-ordinator for ‘middle-out’ modelling 450

of biological systems

*Dawn C. Walker and Jennifer Southgate*

Exploring autonomy through computational biomodelling 462

*Niall Palfreyman*
